The Financial Implications of a Chronic Illness
Take Charge of Your Student Debt Repayment Plan
What are the new rules for 401(k) hardship withdrawals?
Should I enroll in a health savings account?

Mid-Year Planning: Tax Changes to Factor In

The Tax Cuts and Jobs Act, passed in December of last year, fundamentally changes the federal tax landscape for both individuals and businesses. Many of the provisions in the legislation are permanent, others (including most of the tax cuts that apply to individuals) expire at the end of 2025. Here are some of the significant changes you should factor in to any mid-year tax planning. You should also consider reviewing your situation with a tax professional.

New lower marginal income tax rates

In 2018, there remain seven marginal income tax brackets, but most of the rates have dropped from last year. The new rates are 10%, 12%, 22%, 24%, 32%, 35%, and 37%. Most, but not all, will benefit to some degree from the lower rates. For example, all other things being equal, those filing as single with taxable incomes between approximately \$157,000 and \$400,000 may actually end up paying tax at a higher top marginal rate than they would have last year. Consider how the new rates will affect you based on your filing status and estimated taxable income.

Higher standard deduction amounts

Standard deduction amounts are nearly double what they were last year, but personal exemptions (the amount, \$4,050 in 2017, that you could deduct for yourself, and potentially your spouse and your dependents) are no longer available. Additional standard deduction amounts allowed for the elderly and the blind remain available for those who qualify. If you're single or married without children, the increase in the standard deduction more than makes up for the loss of personal exemption deductions. If you're a family of four or more, though, the math doesn't work out in your favor.

Itemized deductions — good and bad

The overall limit on itemized deductions that applied to higher-income taxpayers is repealed, the income threshold for deducting medical expenses is reduced for 2018, and the income

limitations on charitable deductions are eased. That's the good news. The bad news is that the deduction for personal casualty and theft losses is eliminated, except for casualty losses suffered in a federal disaster area, and miscellaneous itemized deductions that would be subject to the 2% AGI threshold, including tax-preparation expenses and unreimbursed employee business expenses, are no longer deductible. Other deductions affected include:

- **State and local taxes** — Individuals are only able to claim an itemized deduction of up to \$10,000 (\$5,000 if married filing a separate return) for state and local property taxes and state and local income taxes (or sales taxes in lieu of income).
- **Home mortgage interest deduction** — Individuals can deduct mortgage interest on no more than \$750,000 (\$375,000 for married individuals filing separately) of qualifying mortgage debt. For mortgage debt incurred prior to December 16, 2017, the prior \$1 million limit will continue to apply. No deduction is allowed for interest on home equity loans or lines of credit unless the debt is used to buy, build or substantially improve a principal residence or a second home.

Other important changes

- **Child tax credit** — The credit has been doubled to \$2,000 per qualifying child, refundability has been expanded, and the credit will now be available to many who didn't qualify in the past based on income; there's also a new nonrefundable \$500 credit for dependents who aren't qualified children for purposes of the credit.
- **Alternative minimum tax (AMT)** — The Tax Cuts and Jobs Act significantly narrowed the reach of the AMT by increasing AMT exemption amounts and dramatically increasing the income threshold at which the exemptions begin to phase out.
- **Roth conversion recharacterizations** — In a permanent change that starts this year, Roth conversions can't be "undone" by recharacterizing the conversion as a traditional IRA contribution by the return due date.

The Financial Implications of a Chronic Illness

There's no such thing as a one-size-fits-all financial plan for someone with a chronic illness. Every condition is different, so your plan must be tailored to your needs and challenges, and reviewed periodically.

All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.

The cost and availability of life insurance depend on factors such as age, health, and the type and amount of insurance purchased.

When you live with a chronic illness, you need to confront both the day-to-day and long-term financial implications of that illness. Talking openly about your health can be hard, but sharing your questions and challenges with those who can help you is extremely important, because recommendations can be better tailored to your needs. Every person with a chronic illness has unique issues, but here's a look at some topics you might need help with.

Money management

A budget is a useful tool for anyone, but it's especially valuable when you have a chronic illness, because it will serve as a foundation when planning for the future. Both your income and expenses may change if you're unable to work or your medical costs rise, and you may need to account for unique expenses related to your condition. Clearly seeing your overall financial picture can help you feel more in control.

Keeping good records is also important. For example, you may want to set up a system to help you track medical expenses and insurance claims. You may also want to prepare a list of instructions for others, such as a trusted friend or relative, that includes where to find important household and financial information in an emergency.

Another step you might want to take is simplifying your finances. For example, if you have numerous financial accounts, you could consolidate them to make it easier and quicker for you or a trusted advisor to manage. Setting up automatic bill payments or online banking can also help you keep your budget on track and ensure that you pay all bills on time.

Insurance

Reviewing your insurance coverage is essential. Read your health insurance policy and make sure you understand your copayments, deductibles, and the nuts and bolts of your coverage. In addition, find out if you have any disability coverage, and what terms and conditions apply.

You might assume that you can't purchase additional life insurance, but this isn't necessarily the case. It may depend on your condition or the type of life insurance you're seeking. Some policies will not require a medical exam or will offer guaranteed coverage. If you already have life insurance, find out if your policy includes accelerated (living) benefits. You'll also want to review beneficiary designations. If you're married, make sure that your spouse has adequate insurance coverage, too.

Investing

Having a chronic illness can affect your investment strategy. Your income, cash-flow requirements, and tolerance for risk may change, and your investment plan may need to be adjusted to account for both your short-term and long-term needs. You may need to keep more funds in a liquid account now (for example, to help meet day-to-day living expenses or use for home modifications, if necessary), and you'll want to thoroughly evaluate your long-term needs before making investment decisions. The course of your illness may be unpredictable, so your investment plan should remain flexible and be reviewed periodically.

Estate planning

You might think of estate planning only as something you do to get your affairs in order in the event of death, but estate planning tools can also help you manage your finances right now.

For example, a durable power of attorney can help protect your property in the event you become unable to handle financial matters. A durable power of attorney allows you to authorize someone else to act on your behalf, so he or she can do things like pay everyday expenses, collect benefits, watch over your investments, and file taxes.

A living trust (also known as a revocable or inter vivos trust) is a separate legal entity you create to own property, such as your home or investments. The trust is called a living trust because it's meant to function while you're alive. You control the property in the trust and, whenever you wish, can change the trust terms, transfer property in and out of the trust, or end the trust altogether. You name a co-trustee such as a financial institution or a loved one who can manage the assets if you're unable to do so. There are costs and ongoing expenses associated with the creation and maintenance of trusts.

You may want to have advance medical directives in place to let others know what medical treatment you would want, or that allow someone to make medical decisions for you, in the event you can't express your wishes yourself. Depending on what's allowed by your state, these directives may include a living will, a durable power of attorney for health care, and a Do Not Resuscitate order.

Review your plan regularly

As your health changes, your needs will change too. Make sure to regularly review and update your financial plan.

Take Charge of Your Student Debt Repayment Plan

If you have federal student loans, you aren't automatically eligible for an income-driven repayment plan — you have to fill out an application (and reapply each year).

Outstanding student loan debt in the United States has tripled over the last decade, surpassing both auto and credit card debt to take second place behind housing debt as the most common type of household debt.¹ Today, more than 44 million Americans collectively owe more than \$1.4 trillion in student debt.² Here are some strategies to pay it off.

Look to your employer for help

The first place to look for help is your employer. While only about 4% of employers offer student debt assistance as an employee benefit, it's predicted that more employers will offer this benefit in the future to attract and retain talent.

Many employers are targeting a student debt assistance benefit of \$100 per month.³ That doesn't sound like much, but it adds up. For example, an employee with \$31,000 in student loans who is paying them off over 10 years at a 6% interest rate would save about \$3,000 in interest and get out of debt two and a half years faster.

Understand all your repayment options

Unfortunately, your student loans aren't going away. But you might be able to choose a repayment option that works best for you. The repayment options available to you will depend on whether you have federal or private student loans. Generally, the federal government offers a broader array of repayment options than private lenders. The following payment options are for federal student loans. (If you have private loans, check with your lender to see which options are available.)

Standard plan: You pay a certain amount each month over a 10-year term. If your interest rate is fixed, you'll pay a fixed amount each month; if your interest rate is variable, your monthly payment will change from year to year (but it will be the same each month for the 12 months that a certain interest rate is in effect).

Extended plan: You extend the time you have to pay the loan, typically anywhere from 15 to 30 years. Your monthly payment is lower than it would be under a standard plan, but you'll pay more interest over the life of the loan because the repayment period is longer.

Example: You have \$31,000 in student loans with a 6% fixed interest rate. Under a standard plan, your monthly payment would be \$344, and your total payment over the term of the loan would be \$41,300, of which \$10,300 (25%) is interest. Under an extended plan, if the term were increased to 20 years, your monthly payment would be \$222, but your total payment over the term of the loan would be \$53,302, of which \$22,302 (42%) is interest.

Graduated plan: Payments start out low in the early years of the loan, then increase in the later years of the loan. With some graduated repayment plans, the initial lower payment includes both principal and interest, while under other plans the initial lower payment includes interest only.

Income-driven repayment plan: Your monthly payment is based on your income and family size. The federal government offers four income-driven repayment plans for federal student loans only:

- Pay As You Earn (PAYE)
- Revised Pay As You Earn (REPAYE)
- Income-Based Repayment (IBR)
- Income-Contingent Repayment (ICR)

You aren't automatically eligible for these plans; you need to fill out an application (and reapply each year). Depending on the plan, your monthly payment is set between 10% and 20% of your discretionary income, and any remaining loan balance is forgiven at the end of the repayment period (generally 20 or 25 years depending on the plan, but 10 years for borrowers in the Public Service Loan Forgiveness Program). For more information on the nuances of these plans or to apply for an income-driven plan, visit the federal student aid website at studentaid.ed.gov.

Can you refinance?

Yes, but only with a new private loan. (There is a federal consolidation loan, but that is different.) The main reason for trying to refinance your federal and/or private student loans into a new private loan is to obtain a lower interest rate. You'll need to shop around to see what's available.

Caution: If you refinance, your old loans will go away and you will be bound by the terms and conditions of your new private loan. If you had federal student loans, this means you will lose any income-driven repayment options.

Watch out for repayment scams

Beware of scammers contacting you to say that a special federal loan assistance program can permanently reduce your monthly payments and is available for an initial fee or ongoing monthly payments. There is no fee to apply for any federal repayment plan.

What are the new rules for 401(k) hardship withdrawals?

The Bipartisan Budget Act passed in early 2018 relaxed some of the rules governing hardship withdrawals from 401(k)s and similar plans. Not all plans offer hardship withdrawals, but the ones that do will be required to comply for plan years beginning in 2019.

In order to take a hardship withdrawal from a 401(k) or similar plan, a plan participant must demonstrate an "immediate and heavy financial need," as defined by the IRS. (For details, visit the IRS website and search for Retirement Topics - Hardship Distributions.) The amount of the withdrawal cannot exceed the amount necessary to satisfy the need, including any taxes due.¹

Current (pre-2019) rules

To determine if a hardship withdrawal is qualified, an employer may rely on an employee's written statement that the need cannot be met using other financial resources (e.g., insurance, liquidation of other assets, commercial loans). In many cases, an employee may also be required to take a plan loan first.

Withdrawal proceeds can generally come only from the participant's own elective deferrals, as well as nonelective (i.e., profit-sharing) contributions, regular matching contributions, and possibly certain pre-1989 amounts.

Finally, individuals who take a hardship withdrawal are prohibited from making contributions to the plan — and therefore receiving any related matching contributions — for six months.

New rules

For plan years beginning after December 31, 2018, the following changes will take effect:

1. Participants will no longer be required to exhaust plan loan options first.
2. Withdrawal amounts can also come from earnings on participant deferrals, as well as qualified nonelective and matching contributions and earnings.
3. Participants will no longer be barred from contributing to the plan for six months.

¹ Hardship withdrawals are subject to regular income tax and a possible 10% early-distribution penalty tax.

Should I enroll in a health savings account?

A health savings account (HSA) is a tax-advantaged account that you can establish and contribute to if you are enrolled in a high-deductible health plan (HDHP). Because you shoulder a greater portion of your health-care costs, you'll usually pay a much lower premium for an HDHP than you would pay for traditional health insurance. This allows you to contribute the premium dollars you're saving to your HSA. Then, when you need medical care, you can withdraw HSA funds to cover your expenses, or opt to pay your costs out-of-pocket if you want to save your account funds. An HSA can be a powerful savings tool, especially if your health expenses are relatively low, since you may be able to build up a significant balance in your HSA over time. Before you enroll in an HSA, ask yourself the following questions:

What will your annual out-of-pocket costs be under the HDHP you're considering? Estimate these based on your current health expenses. The lower your costs, the easier it may be to accumulate HSA funds.

How much can you afford to contribute to your HSA every year? Contributing as much as you

can on a regular basis is key to building a cushion against future expenses. For 2018, you can contribute up to \$3,450 for individual coverage and \$6,900 for family coverage.

Will your employer contribute to your HSA? Employer contributions can help offset the increased financial risk that you're assuming by enrolling in an HDHP rather than traditional employer-sponsored health insurance.

Are you willing to take on more responsibility for your own health care? For example, to achieve the maximum cost savings, you may need to research costs and negotiate fees with health providers when paying out-of-pocket.

How does the coverage provided by the HDHP compare with your current health plan? Don't sacrifice coverage to save money. Read all plan materials to make sure you understand benefits, exclusions, and all costs.

What tax savings might you expect? HSA funds can be withdrawn free of federal income tax and penalties provided the money is spent on qualified health-care expenses. Depending on the state, HSA contributions and earnings may or may not be subject to state taxes. Consult your tax adviser for more information.
